Treatment with supports and
orthoses suited to the indication

medi. I feel better.

A close-up photograph of a person's hands at a desk. The left hand is typing on a dark laptop keyboard. The right hand is wearing a black, textured medical orthosis (brace) that covers the wrist and extends up the forearm. The person is wearing a light blue sleeve. The background is a light-colored desk surface.

Dear Reader,

medi offers your patients high-quality hand supports and orthoses for indication specific therapy. The products promote the healing process and convince users with their outstanding comfort in wear and simple handling.

The following pages will give you an overview of medi's medical devices for stabilising, relieving and immobilising the hand.

Indication table

Manumed active

Comfort wrist support for soft tissue compression with stabilising rod

Indications

All indications in which support of the wrist by a strengthening or pad is necessary, such as:

- wrist injuries, e.g. sprains, distortions
- osteoarthritis of the wrist
- tenosynovitis
- instability

Mode of action

- stabilisation, relief and pain reduction on the wrist are achieved by uniting compressive knitted fabric, a hand splint and an additional strap
- compressive knitted fabric limits swelling
- correct positioning of the strap and stress relief on the external knuckles via optimized strap opening
- the compressive knitted fabric can improve proprioception. The improvement in proprioception supports the body's own guidance and stabilizes the joint

Why Manumed active?

The optimally-sized volar hand splint stabilises and reduces strain on the wrist. It is anatomically pre-formed and individually adjustable.

Product benefits

Fit adapts to the body with high elasticity, particularly in the thumb area, achieved via an optimized Comfort Zone.

Supple border prevents constriction.

Effective support and stabilisation via optimally sized, anatomically premoulded hand splint.

Accessories

Easy to put on with included donning aid.

silver

Clima Comfort

Clima Fresh

Comfort Zone

Intended purpose: Wrist compression support

Manumed active E⁺motion[®]

Performance wrist bandage for soft tissue
compression with stabilising rod

Indications

All indications in which support of the wrist by a strengthening or pad is necessary, such as:

- wrist injuries, e.g. sprains, distortions
- osteoarthritis of the wrist
- tenosynovitis
- instability

Mode of action

- stabilisation, stress relief and pain reduction on the wrist are achieved by uniting compressive knitted fabric, a hand splint and an additional band strap
- compressive knitted fabric limits swelling
- correct positioning of the strap and stress relief on the external knuckles via optimized band strap opening
- the compressive knitted fabric can improve proprioception. The improvement in proprioception supports the body's own guidance and stabilizes the joint

Product benefits

Quartz strap for stabilization.

XL movement zone for even better performance.

Relief for the ulnar styloid thanks to strap opening.

Merino wool: odour inhibiting and thermoregulating, mulesing-free.

Active fibres for improved breathability.

Accessories

Easy to put on with included donning aid.

Intended purpose: Wrist compression support

medi Wrist support

Wrist brace for immobilisation

Indications

All indications in which an immobilisation of the wrist in at least two directions of movement with free finger mobility is necessary, such as:

- immobilisation after distorsions
- tendonitis and / or tenosynovitis
- after distal radius fracture (nonsurgical, postoperative)
- rheumatoid arthritis
- carpal tunnel syndrome
- postoperative after triangular fibrocartilage complex repair
- guyon's canal syndrome

Mode of action

- immobilisation of the wrist while enabling the fingers and thumb to move freely
- movement-related pain can be prevented by immobilisation

Product benefits

Extra wide supporting strap for the wrist.

Aluminium splint which can be reshaped.

Made of skin-friendly, robust cotton-lycra material.

Intended purpose: Wrist brace for immobilising the wrist in at least two directions of mobilisation

Manumed

Wrist brace for immobilisation

Indications

All indications in which an immobilisation of the wrist in at least two directions of movement with free finger mobility is necessary, such as:

- immobilisation after distorsions
- tendonitis and / or tenosynovitis
- after distal radius fracture (nonsurgical, postoperative)
- rheumatoid arthritis
- carpal tunnel syndrome
- postoperative after triangular fibrocartilage complex repair
- guyon's canal syndrome

Mode of action

- reduction of movement-related pain due to volar stabilisation
- immobilisation of the wrist while enabling the fingers and thumb to move freely

Why Manumed?

Slip-on version enables it to be put on with one hand.

Product benefits

Easy to put on due to open slip-on design and integrated retaining loops.

Individual adjustment of the aluminium splint to the hand of the patient.

 grey

 black

medi Airtex

Comfortable to wear due to active, breathable medi Airtex material.

Manumed Kidz

Wrist brace for immobilisation

Indications

All indications in which an immobilisation of the wrist in at least two directions of movement with free finger mobility is necessary, such as:

- immobilisation after distorsions
- tendonitis and / or tenosynovitis
- after distal radius fracture (nonsurgical, postoperative)
- rheumatoid arthritis
- carpal tunnel syndrome
- postoperative after triangular fibrocartilage complex repair
- guyon's canal syndrome

Mode of action

- movement-related pain can be prevented by immobilisation
- stabilisation and immobilisation of the wrist while enabling the fingers and thumb to move freely

Why Manumed Kidz?

Reliable immobilisation of the wrist due to the volar aluminium splint.

Product benefits

Comfortable to wear due to active, breathable material. Easy to put on due to open slip-on design.

Product designed specifically for children.

Individual adjustment of the aluminium splint to the hand of the patient.

Note

From a wrist circumference of more than 15 cm the Manumed can be prescribed.

Intended purpose: Wrist brace for immobilising the wrist in at least two directions of mobilisation

Manumed T

Wrist brace with thumb support for immobilisation

Indications

All indications that require immobilisation of the wrist with thumb fixation, such as:

- distortion of the wrist and / or thumb
- postoperative immobilisation of the wrist and thumb
- lesions of the collateral ligaments of the basal thumb joint
- tendinitis and tenosynovitis of the wrist and / or thumb
- inflammatory phases of rheumatic diseases
- rhizarthritis

Mode of action

- prevention of movement-related pain by stabilisation of the wrist and thumb
- immobilisation and stabilisation of the thumb saddle joint and thumb metacarpophalangeal joint by holding the thumb in a functional position
- immobilisation of the wrist and thumb while ensuring that the fingers can move freely
- load relief of the affected joints by immobilising them in a functional position

Why Manumed T?

Slip-on version enables it to be put on with one hand.

Product benefits

Easy to put on due to open-slip-on design and integrated retaining loops.

Individual adjustment of the aluminium splint to the hand of the patient.

grey

black

medi Airtex

Comfortable to wear due to active, breathable medi Airtex material.

Intended purpose: Wrist brace with thumb support used for immobilisation

Manumed RFX

Wrist and forearm brace
for immobilisation

Indications

All indications in which an immobilisation of the wrist in at least two directions of movement with free finger mobility is necessary, such as:

- immobilisation after distortions
- tendonitis and / or tenosynovitis
- after distal radius fracture (nonsurgical, postoperative)
- rheumatoid arthritis
- carpal tunnel syndrome
- postoperative after triangular fibrocartilage complex repair
- guyon's canal syndrome

Mode of action

- effective immobilisation thanks to extra-long dorsal and volar splints.
Can be used instead of a plaster cast.
- stabilisation of the wrist without exerting pressure
- secure immobilisation of the wrist and forearm while ensuring that the finger and thumb can move freely
- movement-related pain can be prevented by immobilisation
- easy and non-painful to put on, bandage can be worn beneath

Why Manumed RFX?

Extra long dorsal and volar splints for optimum immobilisation.
Can be used instead of a plaster cast.

Product benefits

Extra-wide opening to facilitate putting on.

Brace is designed with highly elastic mesh material which ensures a high level of breathability and makes it easy to put on.

Extra-long volar and dorsal aluminium splints are anatomically pre-moulded and adjusted to fit the individual.

medi Airtex®

Intended purpose: Wrist brace for immobilising the wrist in at least two directions of mobilisation

medi CTS

Wrist brace with finger splint

Indications

All indications requiring immobilisation of the wrist with finger fixation, such as:

- carpal tunnel syndrome (nonsurgical / postoperative)
- tendonitis, tenosynovitis
- wrist arthrosis
- distortions of the wrist, metacarpals and fingers

Mode of action

- prevention of movement-related pain via stabilisation of the wrist and finger
- effective immobilisation and load relief for the wrist and finger
- secure fixation of the wrist during the night and prevention of undesired dorsal flexion
- therapeutic mobility assured by allowing thumb to move freely
- immobilisation of as many fingers as required by aluminium frame, which can be reshaped

Why medi CTS?

Reliably immobilises the wrist and the fingers.

Product benefits

Easy to put on due to open slip-on design and integrated retaining loops.

Thumb is free to move.

grey

medi Thumb support

Brace for immobilisation of the thumb
saddle joint

Indications

All indications in which an immobilisation of the basal- and saddle thumb joint is necessary, such as:

- rhizathritis
- ligament injuries (ski thumb)
- irritations of the thumb joint

Product benefits

Made of skin-friendly and durable cotton-lycra material.

Mouldable aluminium splint.

Version for the left and right hand.

grey

Intended purpose: Thumb brace for immobilising the saddle joint and / or metacarpophalangeal joint

Rhizomed[®] soft

Brace for immobilisation
of the thumb and saddle joint

Indications

All indications in which an immobilisation of the basal- and saddle thumb joint is necessary, such as:

- rhizathritis
- ligament injuries (ski thumb)
- irritations of the thumb joint

Mode of action

- stabilisation of the thumb saddle joint and basal thumb joint
- reduction of movement related pain due to stabilisation of the thumb joints

Product benefits

Easy handling thanks to open slip-on design.

Fingers can move freely.

 black

Trust the facts

Supports and braces help your patients.

There are many myths. For example, that soft supports and braces lead to muscle atrophy. Or that nobody actually wears medical devices, but they land in the cupboard instead. Many studies and the results of representative patient surveys have proved the opposite.

On the next page you can read how orthopaedic medical devices can accelerate the healing process and ease pain.

Patients say...

One of the most persistent myths is: supports and braces often just lie around in the cupboard, because patients hardly ever wear them.

Surveys show: the opposite is true! The Institute for Demoscology in Allensbach, Germany investigated how intensively soft supports and braces are actually used. Furthermore, 435 wearers of soft supports and braces were asked whether the medical device had changed their sensitivity to pain.¹

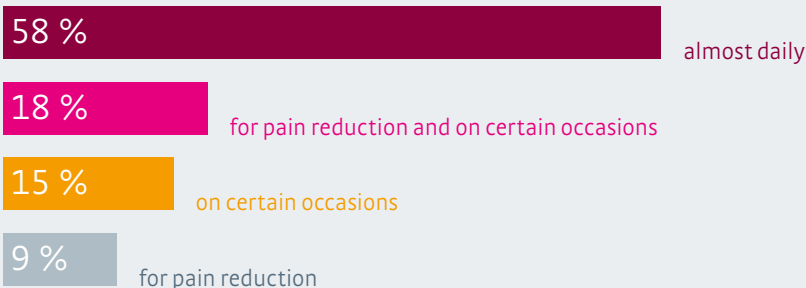

The result:

- patients wear their soft supports and braces regularly
- the medical device had helped their treatment considerably
- soft supports and braces have reduced or stopped the consumption of painkillers

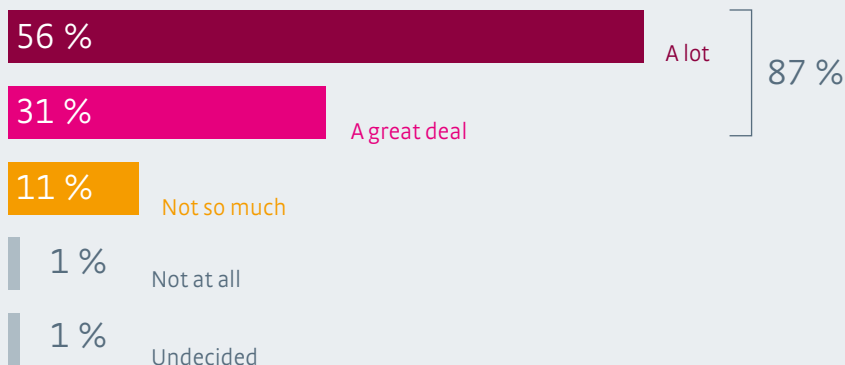

Note

¹ Institute for Demoscology in Allensbach commissioned by eurocom e. V. (March 2014), Elastic soft supports and braces; quality of care and product satisfaction – results of a representative patient survey.

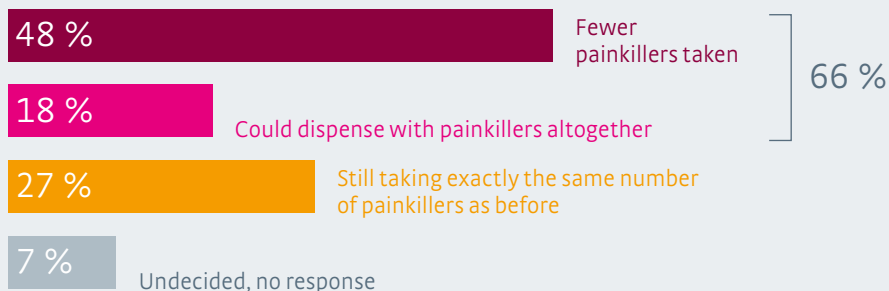

Six out of 10 patients wear their soft support or brace almost every day.

87% of the patients reported the support or brace had been helpful or very helpful for their treatment.

66% of patients with pain reported needing fewer or no painkillers when using the soft support or brace.

The exclusive advantages of the medi products

Clima Comfort

medi Clima Comfort*

- Wicks moisture away from the skin's surface quickly
- Guarantees a high level of breathability

Clima Fresh

medi Clima Fresh

The integrated Clima Fresh function has an odour-inhibiting effect. This is achieved via special processing during the production process.

Comfort Zone

medi Comfort Zone

Soft zones in the sensitive flexor areas ensure that the support does not press on or cut into the skin, even when worn all day long.

> The result: soothing pain relief that simply feels good.

medi Airtex

Airtex Material

An innovative, breathable, light and compressive material for comfortable activation of proprioception. It optimises moisture transport and ensures the highest comfort, even in hot climates.

medi Airtex+

medi Airtex+

The elastic spacer fabric is the combination of medical compression and the textile effects SMART TEMP and FRESH TECH.

SMART TEMP

The adaptive thermo regulation is based on an innovative polymere that changes its properties in response to temperature. At low temperature the polymere binds moisture in its structure keeping the body drier. At high temperature it releases the stored moisture and cools the textile and skin.

FRESH TECH

The antibacterial effect of FRESH TECH guarantees deep optimal hygienic conditions – even after long term use.

> The combination of medical compression and functional textile effects guarantees improved wearing comfort.
